[linkedin.com/in/kokate-snehal](https://www.linkedin.com/in/kokate-snehal) | github.com/SnehalDataAnalyst

OBJECTIVE

Data analyst with hands-on project experience across SQL, Power BI, Tableau and Excel, focused on dashboard design, DAX-driven data modeling, and automated reporting pipelines that turn multi-source datasets into decision-ready insights. Comfortable working end-to-end, from query design and data cleaning through interactive visualization and KPI reporting. Seeking to bring strong analytical rigor to a data analyst or business intelligence role.

EDUCATION

Savitribai Phule Pune University, Pune

2020 – 2024

Bachelor of Pharmacy (B.Pharm) | CGPA: 8.23 / 10

PROJECTS

Sales Intelligence Executive Dashboard – github.com/SnehalDataAnalyst/Sales-Operations-Dashboard-Power-BI

Power BI · DAX · SQL

- Built a 5-page interactive Power BI dashboard on SQL-cleaned sales data (25,156 orders), using DAX to track revenue, profit, order, and return KPIs against monthly and goal benchmarks
- Found that revenue outperformed goal by 50.56% while order volume trailed target, revealing growth driven by higher average order value rather than volume — a key insight for pricing and promotion strategy
- Built customer segmentation (by occupation, income level, age, and gender) and product-level return-rate analysis (7.19% overall) to identify high-value segments and return-risk products

Healthcare Operations Data Analysis – github.com/SnehalDataAnalyst/Healthcare-Data-Analysis

MySQL · Power BI · SQL Window Functions

- Analyzed 19,766 patient records (2019–2024) in MySQL, using window functions (RANK, SUM OVER) to build cohort, trend, and departmental performance views
- Designed a 4-page Power BI dashboard surfacing operational KPIs across departments and time periods
- Published the project with a recruiter-facing README, including badges, formatted tables, and an embedded dashboard preview

Accounts Automation & Financial Reporting System

SQL · Excel · Power BI

- Automated recurring financial reporting workflows with SQL and Power BI, replacing manual spreadsheet consolidation
- Reduced manual reporting effort by 80% through reusable query templates and standardized report structures
- Consolidated data from multiple source files into a single automated reporting pipeline for monthly/quarterly reporting

SKILLS

Programming Languages: SQL, Python (basics)

Tools: Power BI, MySQL, Microsoft Excel, Tableau, DAX

Core Skills: Data Visualization, Dashboard Design, Data Cleaning & Preprocessing, KPI Reporting, Business Intelligence

Concepts: Data Modeling, Star Schema Design, ETL Fundamentals

CERTIFICATIONS

- Accenture – Data Analytics Job Simulation (Forage)
- Tata Group – Data Visualization Job Simulation (Forage)
- Rise Institute – Power BI, SQL & Data Analytics
- Internshala – Clinical Data Analysis and Reporting

LANGUAGES

English – Fluent
