44,900+ Records Analyzed • 80% Manual Reporting Effort Cut • 3 End-to-End BI Dashboards Delivered

PROFESSIONAL SUMMARY

Detail-driven Data Analyst with hands-on, certified expertise in SQL, Power BI, DAX, and Excel. Delivered 3 end-to-end BI dashboards across healthcare, sales, and finance domains — cleaning and modeling **44,900+ records**, automating manual reporting workflows (**80% effort reduction**), and surfacing KPI insights that map directly to business targets. Skilled at turning raw, multi-source data into clear, stakeholder-ready visual stories. Looking to bring this analytical rigor and dashboard-design expertise to a Data Analyst / BI Analyst role.

SKILLS

Programming Languages: SQL, Python (basics)

BI & Visualization Tools: Power BI, DAX, Tableau

Databases & Spreadsheets: MySQL, Excel

Core Competencies: Data Visualization, Dashboard Development, Data Cleaning & Preprocessing, KPI Reporting & Tracking, Business Intelligence, Stakeholder Communication

Concepts: Data Modeling, Star Schema Design, ETL Fundamentals

Languages: English (Fluent)

PROJECTS

Sales Intelligence Executive Dashboard

Jul – Aug 2026

Power BI · DAX · SQL | github.com/SnehalDataAnalyst/Sales-Operations-Dashboard-Power-BI

- **Consolidated ~25,156 orders** into a 5-page interactive Power BI dashboard (Executive Overview, Customer Segments, Product Performance, KPI Tracking, Regional), replacing scattered manual sales reporting with one live source of truth.
- Surfaced a **7.19% return rate** and confirmed revenue tracking **50.56% above target**, giving stakeholders KPI visibility built on SQL-cleaned data and DAX-driven measures.

Accounts Automation & Financial Reporting System

Apr – May 2026

SQL · Excel · Power BI

- Automated a manual financial reporting workflow across SQL, Excel, and Power BI, cutting reporting effort by **80%** and removing hours of repetitive manual entry each cycle.
- Delivered real-time, drill-down visibility into month-wise payment status via an interactive Power BI tooltip layer, while keeping the report to a single clean page for stakeholders.

Healthcare Operations Data Analysis

Jan – Feb 2026

MySQL · Power BI | github.com/SnehalDataAnalyst/Healthcare-Data-Analysis

- **Transformed 19,766 raw patient records** (2019–2024) into a 4-page Power BI dashboard using SQL window functions (RANK, SUM OVER), turning years of scattered records into at-a-glance utilization trends.
- Enabled faster, data-driven operational decisions by giving hospital stakeholders department-level insights previously available only through manual cross-referencing.
